

## Web based interface

Fluid Fax server is web based and can be accessed by users using a web browser.

## Email integration

Integrates with the existing email systems such as Microsoft Exchange and Lotus Domino for delivery of received faxes.

## Fax broadcast

Perform fax broadcast simply by uploading a text file containing the fax contacts.

## Multilingual support

Supports documents containing Unicode characters. The user interface is in English and can be displayed in Chinese.

## Fax routing

Received faxes are automatically routed based on fax line and CSID to a user's mailbox without the need for manual forwarding.

## Multiple fax lines

Scalable fax server that supports up to 30 fax lines.

## Save time and money

Fluid Fax server saves time and money by allowing users to simply send and receive faxes from their desktops.

Manual faxing is a tedious task. To fax a document, an employee would need to print the document, walk to the printer to collect the printout and then walk to the fax machine. He will also need to write out the cover sheet followed by typing the fax number and then press Send. After which he will need to stand around to confirm that the fax is being delivered. The time taken to send a single fax is about five minutes. The time taken would increase if there is a need to send a large number of faxes.

Fluid Fax server helps to save the time taken by employees to perform manual faxing by allowing them to concentrate on their existing job scope. Furthermore, as the faxes sent and received are in softcopies, there are also considerable savings in paper and toner costs.

## Easy to use

Users can send out and receive faxes the same way as sending and receiving emails using Outlook or other email client programs. Furthermore, users can also perform the same functions with Internet Explorer. Similar to the Print to PDF function, users can also perform a Print to Fax.

## Windows 7 and Vista

Fluid Fax server can be installed on Windows 7 and Windows Vista. This eliminates the need to purchase expensive Windows server software.

# Fluid Fax Server

## More features

- **Automatic faxing from external systems**

External systems such as ERP / Navision can send emails or drop a file to Fluid Fax server for automatic faxing.

- **Contacts and distribution lists**

Users can maintain global and personal contacts and distribution lists for faxing.

- **Automatic document conversion**

Users can send documents such as MS Office, PDF and other formats for faxing easily.

- **Customizable cover pages**

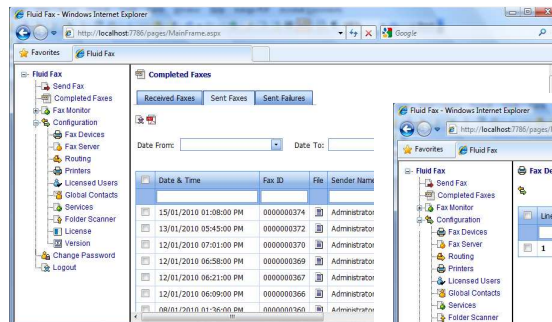

Cover pages can be customized for outgoing faxes to include the company's logo and sender's details.

- **Minimum administration**

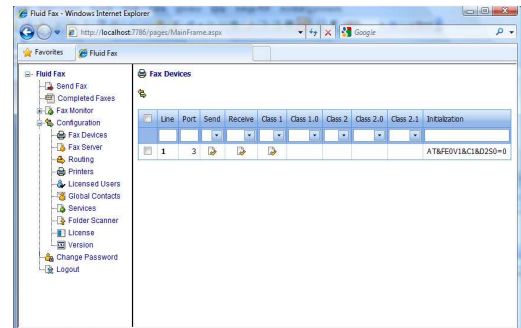

Fluid Fax server is easy to install and configure with minimum administration.
